

Mini Reversible Follow Focus

Petroff Reversible Follow Focus is an extremely accurate clamp-on, quick-release follow focus that clamps onto 15 or 19mm support rods. It can be used on the operator or assistant side and has a **reversible** function for use with some Nikon, Tamron and Tokina lenses whose focus barrels turn the opposite direction of traditional cinematography lenses.

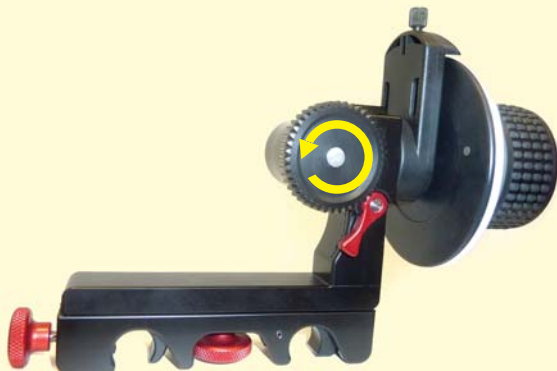

How to reverse the direction of rotation

Direction of rotation

Pull the gear out and release the side read lever

Rotate the head of the follow focus by 180 degrees until it clicks into position

Tighten the side read lever and install the gear

Now the gear rotates in the opposite direction
